BAMBOO
PLANTATION
AND
PRODUCTS,
A PROFITABLE
BUSINESS

www.entrepreneurindia.co
Bamboo is one of the most abundant and environmental-friendly and sustainable resources available in NE Region, which is not being used to its full potential. Bamboos, which are widespread in India, offer numerous opportunities in this regard, and there is much potential for expanding it. In view of commercial cultivation and economic utilization of bamboo as a substitute for the fast depleting timber resources, a comprehensive programme of bamboo for sectional up gradation, enhancement of employment opportunities for artisans, promotion of value-addition through better and well-designed product development, optimum propagation and conservation and diversifying production and processing activities through organized community action has been taken up.
A bamboo farm once started could continue to exist for years on and give you some form of residual income. Bamboo starter plants, meanwhile, are sold from $25 to more than $100. To make sure the bamboo variety you’ve chosen is suited to your place’s climate and soil, grow it on a small scale first. Planting bamboos should follow recommended specifications, particularly with regards to spacing.

Bamboo is a versatile, strong, renewable and environment-friendly material. Bamboo has a lot of economic benefits and that is why it is a brisk business to start a bamboo farms. Because of its strength and resilience, bamboos are utilized as a building material (scaffolding, roofing, flooring et al) in the construction industry,
it can be used to make furniture, it is used for decorations, bamboos are used as writing surface, bamboo fiber are used to make high quality paper, bamboo are used to produce musical instruments and it is also used to construct weapons.

Bamboo and Global Challenges

Bamboo is well placed to address four major global challenges:

- **Shelter security**, through the provision of safe, secure, durable and affordable housing and community buildings.
- **Livelihood security**, through the generation of employment in planting, primary and secondary processing, construction, craft and the manufacture of value-added products.
• Ecological security, by conservation of forests through timber substitution, as an efficient carbon sink, and as an alternative to non-biodegradable and high-embodied energy materials such as plastics and metals.

• Food security through bamboo-based agro-forestry systems, by maintaining the fertility of adjoining agricultural lands, and as a direct food source – example, edible bamboo shoots.

Stating that there is a tremendous demand of bamboo in domestic and global market, "Therefore, there is an immediate requirement to increase production of quality bamboo to meet the enhancing demand in other section of the society apart from elevating bamboo-related traditional industry as well as bamboo enterprises."
There is an urgent requirement to make an expeditious development of bamboo sector in India which is impossible without formulating appropriate strategies. The market for bamboo and bamboo products is growing and over the past years has been spearheaded by a rapid increase in bamboo production.

From the year 2010 to 2015, the growth in the bamboo industry should be starting to acquire a definite contour. While the focus in the foundation years was on the industries that were already using bamboo as a raw material – the paper industry and handicrafts – and setting up the infrastructure and investment in new industries, the emphasis in this stage will be on the shift from lower value-added applications to higher value-added ones – bamboo board, flooring and bamboo shoot for example.
Bamboo is an important non-wood forest product. In India, bamboo, which is traditionally considered the Poor man wood, and labelled as Green Gold is being considered a major export item by the centre for the global market. Bamboo is perfectly suited to agro-forestry as a woody grass. Bamboo has been exploited from natural stands from time immemorial. Bamboo is increasingly being cultivated like other agricultural crops, that is, in professionally managed plantations. The growth of industries utilizing bamboo requires the sustainable cultivation and management of bamboo resources. India is blessed with very rich bamboo resources.
India is blessed with very rich bamboo resources. Bamboo can play an important role in raising forest cover and a major role in stabilization of the environmental problems. The annual yield in tonnes/ha depends on the environment as well as the species. It is estimated that almost 25% of the biomass in the tropics and 20% in the subtropics, come from bamboo. The cultivation of bamboo as a wood substitute helps to offset depletion of the rain forest. Its rapid growth ensures an effective reconstruction of damaged eco systems. Bamboo is one of many sustainable non wood resources that can generate income for a large forest dependent rural population and it needs to take further steps to realize its full potential.
In India, the North East has the largest stock and diversity of bamboos. Though India has the largest area under bamboo, the yield per hectare is very low compared to other countries. Bamboo plantation rising should be encouraged & promoted due to their high value, productivity, uniformity of crop, choice of species linked to peoples' need and industrial need. Bamboo forest constitutes about 13% of the total forest area of the country. About 50% of bamboo produced in India grows in North Eastern region and West Bengal. India has the second largest bamboo reserves in the world after China.

This book basically deals with bamboos in India, the bamboo plant harvesting, cultivating, silviculture and management, collection of material and preparation of cuttings treatment for root induction in cuttings, preparation of nursery and planting nursery management transplanting,
pattern of biomass allocation in growing bambusa bamboos, biochemical characteristics of plantation bamboo leaf (bambusa bambos) with reference to organic productivity, economic analysis, bamboo plantation, problems and prospects, need for bamboo plantation, consumption pattern of bamboos in India, working and finishing qualities of bamboo, bamboos for structural use, pipe water supply system and drainage, bamboo furniture weaving industry etc. This book provides a complete detail on Bamboo plantation and its utilization. This book contains chapters like types of bamboo in India, taxonomy, cultivation, harvesting, growth management, bamboo utilization, Bamboo products and many more. This book will be very helpful to all its readers, environmentalists, agronomists, entrepreneurs, industrialists, or anyone with a special interest in bamboo cultivation.
1. INTRODUCTION

2. DISTRIBUTION OF BAMBOOS IN THE WORLD
Bamboos in Asia
Bangladesh
China
India
Indonesia
Japan
Korea
Loas
Malaysia
Myanmar
Papua New Guinea
Philippines
Singapore
Sri Lanka
3. BAMBOOS IN INDIA
Arundinaria Michaux s.s.
Bambusa Schreber
The Chinese Bamboo
Chimonobambusa Makino
Dendrocalamus Nees
Dinochloa Buse
Drepanostachyum Keng
Gigantochloa Kurz
Himalayacalamus Keng
Indocalamus Nakai
Melocanna Trin.
Ochlandra Thw.
Oxytenanthera Munro
Phyllostachys Sieb. and Zucc.
Pleioblastus Nakai
Pseudosasa Nakai
Pseudoxyenanthera Soderstrom and Ellis
Schizostachyum Nees
Semiarundinaria Makino
Sinarundinaria Nakai
Sinobambusa Makino
Thamnocalamus Munro
Thyrsostachys Gamble

4. THE ENVIRONMENT
The Bamboo Plant
Culm
Rhizome
Flower
Flowering
5. CULTIVATION
Soil
Preparation for Plantations
Fertilizers
Regeneration
Propagation
Silviculture and Management

6. HARVESTING
Yield
Production

7. TAXONOMY

8. ECOLOGICAL REQUIREMENTS
9. GROWTH CHARACTERISTICS
Development of Bud
Clump and Culms
Rhizomes
Flowering
In Vitro Flowering of Bamboo

10. ESTABLISHMENT AND MANAGEMENT
Direct Sowing of Seeds
Seed Characters
Direct Sowing
Transplanting
By Culm With Roots and Rhizome
By Stock With Roots and Rhizome
By Rhizome With Roots
By Offset Planting
By Culm Cutting
Collection of Material and Preparation of Cuttings
Treatment for Root Induction in Cuttings
Preparation of Nursery and Planting
Nursery Management
Transplanting
Precautions
By Branch Cuttings
By Tissue Culture and Macroproliferation
Tissue Culture of Bamboo
Collection of the Bud Materials
Sterilisation of Explants
Preparation of Media
Sub Culture
Rooting and Outplanting
Transplanting
Production of Culms
Macroproliferation
Season of Planting
Number Under Planting
Method of Planting
Guidelines for Management
11. GROWTH AND DEVELOPMENT
Growth of Seedlings
Development of Rhizome
Culm Growth and Development
Annual Recruitment of Culms
Culm Height and Diameter
Monthly Recruitment of Culm
Daily Height Growth
Pattern of Biomass Allocation in Growing Bambusa Bambos

12. BIOMASS AND YIELD
Biomass Production
Total Biomass
Below Ground and Above Ground Ratio
Biochemical Characteristics of Plantation Bamboo Leaf (Bambusa Bambos)
With Reference to Organic Productivity
Economic Analysis
Bambusa Bambos
Dendrocalamus Strictus
Expenditure
Income

13. CYCLE AND FERTILIZER APPLICATION
Felling Cycle
Fertilizer Application
Three Elements (Nitrogen, Phosphorus and Potassium)
Amount of the Three Elements to be Applied
Effect of the Various Kind of Nitrogen Fertilizers
Other Elements (Silicate)
Season of Fertilizer Application

14. INTRODUCTION IN SOCIAL FORESTRY
Strip Plantation
Community Forestry/Programme
Degree of Local Participation
Local Institutions
Land Allocation
Procedure of Working
Requirements/Rule of Working
Resource Sharing
Monitoring of Works
Limitations
The Problem of Land Use Conflicts
Lack of Identity of Interests
Scope for Community Forestry
Agroforestry Plantation
Bamboo with Horticulture Crops
Rehabilitation of Degraded Forest
Afforestation
Reclamation of Wastelands

15. NEED FOR BAMBOO PLANTATION
Present State of Pulp and Paper Industries
Raw Material
Raw Material Status
Guidelines for Raising Bamboo Plantation
Preparation of Nursery and Planting
Transplantation
Production of Culms
Research Work on Selecting Bamboo Species for Paper-making
Comparison of Pulp and Paper Making Characteristics of Plantation Bamboo with some Tree Species
Establishment of a Bamboo Plantation by Paper Industry Bamboo

16. BAMBOO PLANTATION-PROBLEMS AND PROSPECTS
Cultivation Techniques
Projection of Culms
Problems of Cultivation
Seed Collection
Vegetative Propagation
Soil Moisture Conservation
Plant Protection
Weeds
Grazing and Fire

25. CHEMICAL ANALYSIS OF BAMBOO TISSUES
Experimental

26. OPTIMUM DIGESTION CONDITIONS FOR PRODUCTION OF STRONG BAMBOO PULPS - A PRELIMINARY STUDY
Experimental Procedure
Results
Conclusion

27. ANATOMICAL FEATURES OF BAMBOO USED FOR PAPER MANUFACTURE
Growth of Bamboo Culm
Structural Topography of Internode
28. STUDIES ON COLOUR REVERSION OF BAMBOO PULP BLEACHED WITH C-E-H SEQUENCE
Introduction
Literature Review
Experimental
Set 1 - Effect of Delignification
Set 2 - Effect of Over and Underchlorination
Set 3 - Effect of Alkali Charge in Alkali Extraction
Set 4 - Effect of Temperature in Alkali Extraction
Set 5 - Effect of Hypochlorite Charge in Hypo Stage
Set 6 - Effect of pH (Buffer) in Hypo Stage
Set 7 - Effect of Temperature in Hypo Stage
Observations and Discussion
Conclusion

29. EFFECT OF BEATING ON THE CELL MECHANICS OF THE INDIVIDUAL BAMBOO FIBRE
Elementary Fibril
Cell Wall Mechanics of Wood Fibres
Cell Wall Structure
Force Distribution Across the Cell Wall
Internal Fibrillation
External Fibrillation
Bamboo Fibres

30. STUDIES ON THE FINES OF BAMBOO PULP
Experimental
Fractionation of Pulp
Isolation of Fines
Chemical Composition of Fines & Coarse Fractions
Evaluation of Whole Pulp and Fractionated Pulp in Valley Beater
Evaluation of Recombined Pulps
Discussion of Results
Fractionation of Pulp
Chemical Composition of Fines and Coarse Fibre Fractions
Influence of Fines on Some Pulp and Sheet Properties
Properties of Recombined Pulps
Conclusions

Free Instant Online Project Identification and Selection Service

Our Team has simplified the process for you by providing a "Free Instant Online Project Identification & Selection" search facility to identify projects based on multiple search parameters related to project costs namely: Plant & Machinery Cost, Total Capital Investment, Cost of the project, Rate of Return% (ROR) and Break Even Point % (BEP). You can sort the projects on the basis of mentioned pointers and identify a suitable project matching your investment requisites......Read more

Download Complete List of Project Reports:

- Detailed Project Reports

NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our Market Survey cum Detailed Techno Economic Feasibility Report provides an insight of market in India. The report assesses the market sizing and growth of the Industry. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.
And before diversifying/venturing into any product, they wish to study the following aspects of the identified product:

- Good Present/Future Demand
- Export-Import Market Potential
- Raw Material & Manpower Availability
- Project Costs and Payback Period

The detailed project report covers all aspect of business, from analyzing the market, confirming availability of various necessities such as Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Manufacturing Process, Machinery, Raw Materials, Feasibility Study, Investment Opportunities, Cost and Revenue, Plant Economics, Production Schedule,
Working Capital Requirement, uses and applications, Plant Layout, Project Financials, Process Flow Sheet, Cost of Project, Projected Balance Sheets, Profitability Ratios, Break Even Analysis. The DPR (Detailed Project Report) is formulated by highly accomplished and experienced consultants and the market research and analysis are supported by a panel of experts and digitalized data bank.

We at NPCS, through our reliable expertise in the project consultancy and market research field, have demystified the situation by putting forward the emerging business opportunity in India along with its business prospects......Read more
